

## **BEAT THE WINTER BLUES WITH NEW HEATED VEST**

A revolutionary heated vest is set to make its mark this winter. Named the Jett Heated Vest, the fashionable fitted infrared outerwear vest was designed and developed using the latest NASA technologies and manufactured by Melbourne based company Jett Performance Products.

In the 1980's America's National Aeronautical Space Administration (NASA) concluded that infrared stimulation was the ideal way for astronauts to maintain cardiovascular conditioning during long space flights.

Jett Performance Products managing director Rob Vassallo believes that the Jett Heated Vest will help ward off the winter chills and keep us warm when outdoors.

"There's no doubt the heated vest will prove a boon this winter for just about everybody and particularly for those who enjoy being outdoors" says Vassallo. "It is easy to wear and allows the wearer to receive immediate heat, eliminating all winter chills. It's great for golfing, yachting, fishing, walking, gardening or even watching the footy. And it looks good too!"

World tennis champion Todd Woodbridge agrees. "Now that I have retired from the world tennis circuit, I'm spending a lot more time enjoying my second favourite sport, golf. I wear the Jett Vest to keep muscles warm and to improve circulation" he said.

The Jett Heated Vest emits the spectrum of natural sunlight releasing energy to accelerate metabolism, improve circulation and provide warmth. It also can assist in pain relief and help improve cardiovascular performance.

Infrared heat will keep muscles warm, increase blood circulation and can also relieve pain by dilating blood vessels and in turn, enable more oxygen to reach injured areas, helping to speed up the healing process.

A slim rechargeable battery is connected to a remote control switch that powers thermal heating wires embedded in the lining on the back of the waterproof vest and both are concealed in an internal pocket. There are three heat settings; 55°C, 65°C and 75°C, and the vest will provide heating for more than six hours on one fully charged set of batteries. A second battery pack can be kept on hand for continued warmth.

The Jett Heated Vest Pack consists of a heating vest, a rechargeable battery, a battery charger and a control switch and is available in sizes XS to XXXXL. Price is \$AU275.00. A second battery is \$AU82.50
